

AI Readiness Index (ARI)

Data Protection & Privacy Overview

Our Commitment

We are committed to protecting your organization's data and ensuring complete transparency in how information is handled. The AI Readiness Index (ARI) is designed to provide insight without exposure.

1. What We Collect

ARI collects non-sensitive, perception-based inputs related to work patterns and AI readiness, including role/function, task types, AI exposure, and adaptability. This is NOT company data. No systems or internal documents are accessed.

2. What We DO NOT Collect

ARI does not collect names, personal identifiers, financial data, customer information, proprietary company data, or internal documents.

3. Anonymization & Aggregation

All responses are fully anonymized and reported only in aggregated form. No individual responses are visible or shared. Reports require a minimum cohort size.

4. Data Usage

Data is used only to generate the Executive Snapshot Report and optional benchmark comparisons (opt-in only). Your data is never sold or shared externally.

5. Data Control Options

Option	Description
Private Mode	Data used only for your company report
Benchmark Mode (Opt-In)	Anonymous inclusion in industry comparisons
Ephemeral Mode	Data deleted after report generation

6. AI & Model Usage

ARI does not train AI models on your company data. No generative AI models are trained using your inputs.

7. Data Security & Retention

Data is securely stored using industry-standard practices. Data can be deleted upon request at any time.

8. Why This Matters

ARI provides a safe, non-invasive diagnostic to help organizations understand AI readiness without risk.
